

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

EDITORIAL

Sigma Xi has grown in size and expanded in spirit to an extent hardly realized by members of the active chapters unless they have given the national society particular attention. There are now thirty-eight chapters, representing twenty-four states, the District of Columbia, and Canada. The total membership of these chapters numbers a little over three thousand. The total alumni membership numbers approximately fifteen thousand. In other words, the society of the Sigma Xi numbers now something over **eighteen thousand members**. This large group of specially trained high grade men and women are for the most part engaged in scientific work of some kind and in all parts of the world. Sigma Xi men and women are not only doing important work in science themselves, but are supporting by small annual contributions scientific fellowships available for work in fields other than Physics and Chemistry and Medical Science. The holder of the first fellowship accomplished important results and is now connected with Johns Hopkins University where he is continuing the work in his chosen field. It is good for Sigma Xi members to keep these facts in mind and impress them upon the undergraduates and others as they come into membership.
